(54) TIME SLOT APPOINTMENT METHOD OF UPLINK FOR BIDIRECTIONAL RADIO PAGING SYSTEM

(57) Abstract:

PURPOSE: A time slot appointment method of uplink for bidirectional radio paging system is provided to enhance channel efficiency by providing a synchronous signal only to the first packet.

CONSTITUTION: The time slot appointment method of uplink for bidirectional radio paging system comprises: a step making a

transmission message into a single packet by a radio paging terminal if said message uses a single unit packet, and calculating required packet number for transmitting said message and aligning time slots as many as the required packet number to make a long packet if the transmission message uses plural unit packets; a step deciding the position of the time slot to be transmitted; and a step transmitting to the position of said time slot.
